Integration is essential, which is why Thomson Reuters HighQ provides a range of connectors to key systems, including Microsoft® SharePoint, iManage Work, Active Directory®, SQL Server®, and many more, to integrate our cloud-based solutions with your most important on-premises systems.

A D / LDA

HighQ syncs users and groups from AD or LDAP servers so that you can streamline your user management and leverage security groups to reduce administration and minimize risk.

M

SharePoint document libraries, including custom metadata, can be synchronized with the Files and iSheets modules in HighQ to support document sharing between the systems.

M

HighQ provides comprehensive integration with iManage Work so users can upload fi les and folders directly from within the native WorkSite or FileSite interfaces with a simple right click.

CMI

HighQ supports the CMIS standard which enables integration with any other document management system or content repository that also supports it.

ML/

The XML/RSS connector allows news and other updates that can be exposed as XML, RSS, or iCalendar feeds to be imported into the Blog or Events modules from other sources.

L

The SQL database connector allows you to pull structured data in from other sources by mapping SQL tables to iSheets and publishing your structured data in the cloud.
